Ever wonder if your Racor 500 pre-filter needs to be changed? This is a two second install which places a vacuum gauge on top of your Racor .

They were at the Annapolis Sailboat Show where I saw this on display: Cost was \$86.40.

Their item number: CFS CG-4-3030-SS, Stainless Steel Vacuum Gauge w/Max Indicator Needle. Gauge is oil filled to keep the reading steady. According to a Yanmar mechanic the Yanmar 4JHE 44HP diesel will stop pulling in fuel at about 20 in/Hg. So if your engine quits- a quick glance will determine if the problem is with the filter.
