

Max Prop Pitch Guide

With my Yanmar 4JHE (44HP) engine and my 18" standard Max Prop three bladed prop I found that I needed to set the pitch to 8.4. The next step up possible is a pitch of 9.8 at which point the engine could not come all the way up to max RPM. I set the prop at each pitch and had to re-pitch the prop back to 8.4.

Here's a document with my findings with speed -vs- RPM at each pitch setting: [MaxPropPitch.pdf](#)
